OM – Pick Wave

This application creates a pick wave (a batch of shipment lines) against a sales order. It allows the user to create a pick wave, pick confirm, and ship confirm against the sales order.

Workflow Details

First the user scans or enters the sales order.

The list displays the sales order details: Sales Order Lines Item Item Description

Next, the user scans, enters or searches the Release Rule field or leaves this field blank.

The user selects whether he/she wants to override the default setup for the release rule by checking the **Pick Confirm** or **Confirm Shipment** options.

The user taps the **Submit** button to create the pick wave.

Based on the release rules or selected pick confirm or create shipment option, the sales order will have a pick wave generated, pick confirmed, or ship confirmed.

The arrow in the upper left corner takes the user to the menu.
