

SAP

WAREHOUSE MANAGEMENT – PUTAWAY BY TRANSFER REQUIREMENT

This application is used to put away materials by transfer requirement (TR). When material is put away, the general purpose of a TR is to have information about the source such as what kind of storage was used, where was it being stored interimsly etc.

TRs can also be used to initiate material replenishment for production storage in the supply chain process.

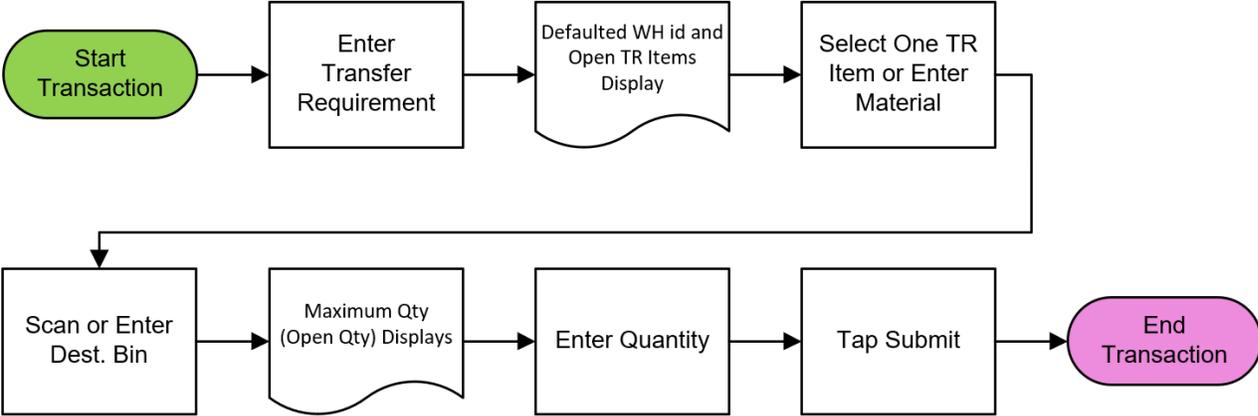

RFgen Functional Documentation

2024

RFgen provides its customers SAP-validated, ready-to-use suites of Open Source applications and a development environment that can be used to create new apps or to modify existing apps.

This document describes the business workflow and technical information used in this application.

SAP: Warehouse Management (WM) – Putaway by Transfer Requirement

Warehouse Management – Putaway by Transfer Requirement

This application is used to put away materials by transfer requirement (TR). When material is put away, the general purpose of a TR is to have information about the source such as what kind of storage was used, where was it being stored interiumly etc. TRs can also be used to initiate material replenishment for production storage in the supply chain process.

Navigation Details

 The Settings button displays at the bottom of the Menu. It allows the user to set re-usable values such as the warehouse ID so the rest of the application workflow can immediately start from this "Location". The Organization will sometimes appear as the Location but is not the same as a Locator.

The Back arrow at the top of an application takes the use to the prior page or field.

EXIT The Exit button exits the application and takes the user to the Menu. If data was entered, the user is informed that data entered will be discarded if the application is exited.

SCAN If the device has a scanning feature, it will scan a barcode and entered the value nto the field that the user is on.

NEXT The Next button is the same as tapping the Enter key on a key board.

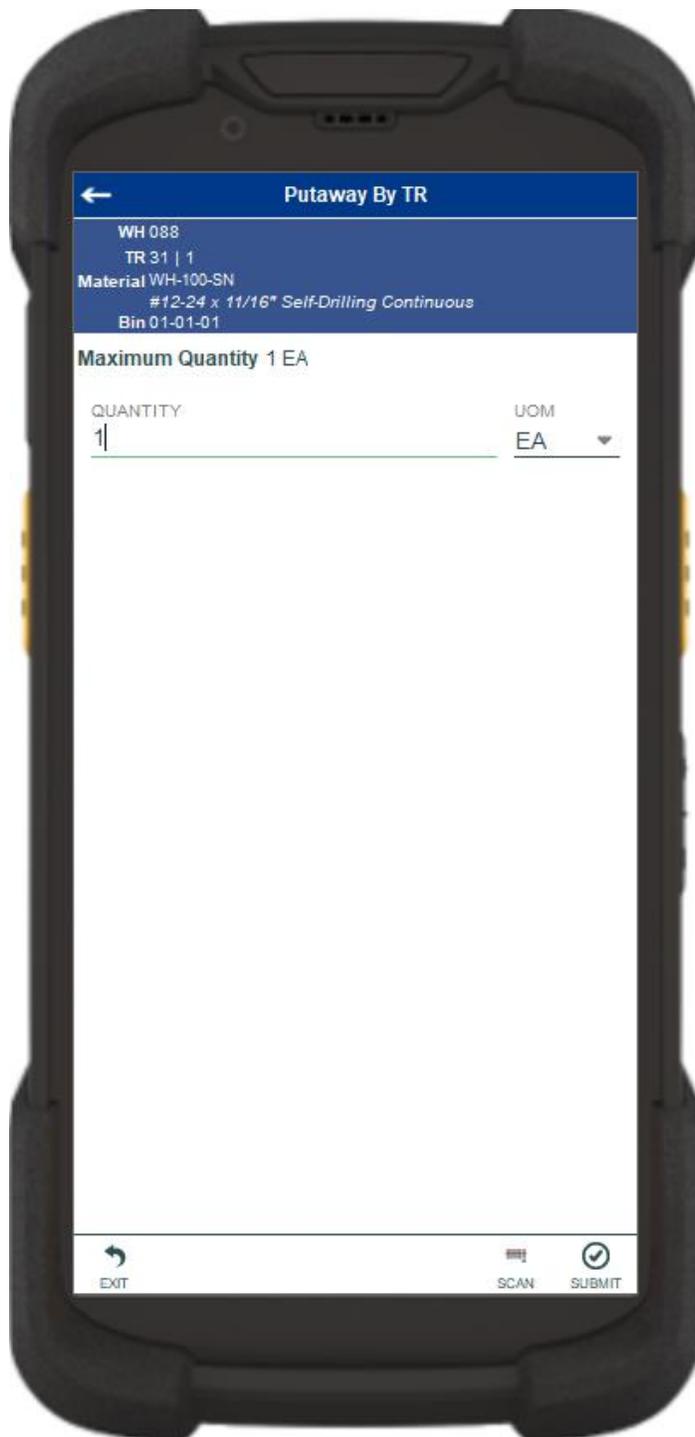

The Filter icon searches for entries by the first few characters or letters in a Search list

SUBMIT The Submit button will display when the last field for completing a transaction is reached. The last field of a workflow depends on how the customer's data is setup.

Description of Workflow

First the user will scan, enter, or search for a transfer requirement (TR).

The TR must be open to putaway.

In this example, the warehouse (WH) id defaulted from the user's login displays at the top of the application.

A list of open TR lines with details including material, material description, and open quantity to pick is also displayed.

Next, the user enters or scans a material, or selects one item from the list to proceed.

The user scans, enters, or searches for the bin where the material is put away.

The open quantity on the TR item displays as the maximum quantity.

The user enters the quantity to putaway.

The user taps **Submit** button to post the transaction to SAP.

The arrow in the upper left corner undoes the current entry and moves the cursor back to the previous prompt until you reach the menu.

Technical Information

This lists the tables used for validations, searches and defaults by prompt.

Prompt	Table	Description
WH	T300T	Warehouse Master
Plant	T001W	Plant Master
Bin	LAGP	Bin Details
App Lookup	LQUA	Warehouse stock details
Transfer Requirement	LTBK	Transfer Requirement Header
Transfer Requirement Item	LTBP	Transfer Requirement Item
